OneBizHub Business Cloud

Funambol OneBizHub is a white-label business cloud file sync & share solution. It enables mobile providers to go to market with a branded service that provides an easy and secure way for business users to sync and share files. OneBizHub offers a cross-platform file-centric user experience that is optimized for the types of data used, and tasks performed, by business users.

OneBizHub provides a secure cloud account for users to store files. The user installs OneBizHub apps on their computers and mobile devices that seamlessly interact with their cloud account. On computers, OneBizHub creates a drive 'vault' to store files. A user drags-and-drops files or folders into the vault, which are encrypted and auto-synced with the user's cloud account. A user can also save a file in the vault from applications, such as MS Office, and the file is auto-encrypted and synced with their cloud account. OneBizHub apps on smartphones and tablets provide secure access to a user's files, as does a web portal. This cross-platform approach enables users to access their business data anytime.
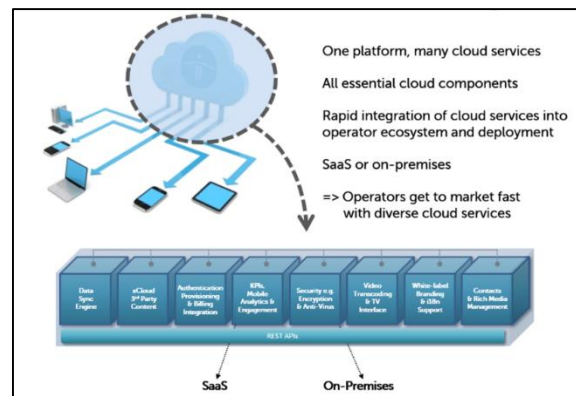

OneBizHub's major capabilities include:
- Extensive cloud storage for end users
- Encrypted local drive vault with file permissions and tracking
- Automatic cloud sync
- File backup
- File access control e.g. password protected links, number of allowed downloads
- File and folder sharing via email links with tracking
- Cross-platform support for popular mobile devices, personal computers and the web
- Web-based administration to define and manage users and accounts
- Scalable and fault-tolerant architecture
- Extensibility to control and adapt the solution via REST-like APIs

OneBizHub uniquely combines these elements in a business cloud file sync & share solution:
- white-label enables mobile providers to go to market with their brand and to integrate with their billing, user authentication and other systems
- rapidly deployed in the cloud or on-premises
- local encryption for hardened security
- optimized for SMBs in its usability and feature set

OneBizHub uses the Funambol OneHub platform that has core functions for multiple cloud services.

These functions include:

- Data sync engine to keep mobile devices and computers in sync with a user's cloud account
- xCloud to enable 3rd party content from cloud drives and social networks to be in a user's cloud
- Authentication, provisioning & billing integration with an operator's systems
- KPIs and mobile analytics and engagement to foster user adoption
- Security, such as encryption and anti-virus
- Content transcoding and TV support
- White-label branding and internationalization support
- Contacts and rich media management

The platform provides robust REST APIs to enable its functions and cloud services to be accessed and controlled by other software. Its modern architecture is based on industry standards for rapid integration into a provider's infrastructure. It is designed for scalability, high availability and high performance. The platform can be deployed on-premises or hosted in the cloud by Funambol or a third party. This enables mobile providers to go to market quickly with best-in-class cloud services such as:

- Personal clouds for consumers
- Family safety clouds for families
- Business clouds for small & medium businesses (SMBs)
- SIM clouds for feature phones
- Internet of Things (IoT) clouds for IoT services

Why Mobile Providers Choose Funambol

Mobile providers select Funambol for several reasons - they:

- view Funambol as the leading provider of white-label cloud services, with the best vision, platform, solutions, execution and mobile expertise
- believe that Funambol offers the best white-label personal cloud solution, with its digital life-centric user experience, flexibility and deployment options
- understand that Funambol has a strong track record of deploying solutions for a wide range of companies and helping them launch on-time and on-budget
- conduct technical due diligence in several areas, including performance, security, integration and extensibility, and are highly satisfied with the results
- speak with Funambol customers who explain how Funambol helps them realize their cloud objectives
- appreciate Funambol's willingness to work with customers using flexible business models
